

The main image shows a large, dark grey, rack-clad building with a gabled roof. The building features two large, roll-up doors on the front facade. It is situated on a wet concrete pad, and the background includes a blue sky with scattered white clouds, a fence, and some trees. The overall scene is bright and clear.

RACK CLAD BUILDING SYSTEMS

RACK CLAD BUILDING SYSTEMS

PROTECT YOUR STOCK FROM THE ELEMENTS

- Cantilever Racking or Heavy Duty Racking forms the integral structure of the building.
- Fully modular system – could be extended with additional racking and roofing in future.
- Options to fit roller shutter doors, fire doors, pedestrian doors, etc.
- Can show a considerable saving against a traditionally constructed building with racking purchased separately.

MAXIMISES USE OF AVAILABLE SPACE & HELPS TO ORGANISE STORAGE

- Purpose-built structural foundations are not always required.
- Fitted with rainwater goods.
- All products comply with current British and CE marking standards.
